Dear Jerry:

SUBJECT: Washing of Donaldson Element Assemblies

Most Donaldson elements are manufactured with washable filter media, a feature that maintains filter life and efficiency under operating conditions.

When a used air element reaches the maximum allowable engine or vehicle air flow restriction limit and is washed, it will regain 75-80% of its original life. Each subsequent cleaning yields progressively reduced dust capacity. Efficiency of the air element is not reduced. The element retains the high efficiency of a new element. Donaldson air elements can be washed up to six times.

If you have any questions or wish to discuss further, please don't hesitate to contact me. My number is 612-887-3406.

Sincerely,

DONALDSON COMPANY, INC.
